

AWS Rekognition

The screenshot shows the AWS Rekognition console interface. At the top, the browser address bar displays the URL `ap-south-1.console.aws.amazon.com/rekognition/home?region=ap-south-1#`. The AWS console header includes the Amazon logo, a search bar, and navigation icons. The left sidebar lists various services, with 'Amazon Rekognition' selected. The main content area features a large hero section with the title 'Amazon Rekognition' and the subtitle 'Deep learning-based visual analysis service'. Below this, there are three columns of information: 'Leverage proven image and video analysis', 'Detect objects unique to your business', and 'Integrated with AWS Services'. The footer contains links for 'CloudShell', 'Feedback', 'Console Mobile App', and copyright information for 2026.

Leverage proven image and video analysis

You don't need computer vision or deep learning expertise to take advantage of Rekognition's high quality image and video analysis for your web, mobile, enterprise or device applications. Amazon Rekognition removes the complexity of building visual recognition capabilities by making powerful and accurate analysis available with easy to use APIs.

Detect objects unique to your business

Use Amazon Rekognition Custom Labels to quickly build your own custom ML model to detect objects and scenes unique to your business, simply by bringing your own training data. Leverage a guided experience, no machine learning experience is required.

Integrated with AWS Services

Amazon Rekognition is designed to work seamlessly with other AWS services. Rekognition integrates directly with Amazon S3 and AWS Lambda so you can build scalable, affordable, and reliable visual analysis applications. You can start analyzing images and videos stored in Amazon S3 without moving any data. You can also run real-time video analysis on streams coming from Amazon Kinesis Video Streams.

1. Image Label Detection

- Use Rekognition to detect objects (e.g., car, person, dog)
- Output labels with confidence scores

Example use: “Detect objects in an image and list top 5 labels”

The screenshot shows the Amazon Rekognition console interface. On the left is a navigation menu with options like Custom Moderation, Bulk Analysis, Custom Labels, Demos, and Video Demos. The main area is titled 'Label detection' and contains a message about custom labels, a sample image of a street scene with bounding boxes around cars and a person, and a 'Search all labels' section. The 'Results' section lists the top 5 labels with their confidence scores.

Label	Confidence Score
Neighborhood	99.9 %
City	99.9 %
Road	99.9 %
Street	99.9 %
Urban	99.9 %
Person	98.7 %

2. Face Detection & Analysis

- Detect faces in an image
- Analyze attributes like:
 - Age range
 - Gender
 - Emotions (happy, sad, angry)
- Return bounding box coordinates

The screenshot shows the Amazon Rekognition console's 'Facial analysis' page. On the left is a navigation menu with options like 'Custom Moderation', 'Bulk Analysis', 'Custom Labels', 'Demos', and 'Video Demos'. The 'Facial analysis' section is selected. The main area displays a sample image of a woman driving a yellow car, with a blue bounding box around her face. Below the image are buttons for 'Choose a sample image' and 'Use your own image' (with an 'Upload or drag and drop' button). To the right, a 'Results' table lists various attributes and their confidence scores.

Results	
looks like a face	99.9 %
appears to be female	98.7 %
age range	24 - 30 years old
smiling	88.9 %
appears to be happy	99.6 %
wearing glasses	100 %

Below the table is a 'Show more' link. The footer of the console shows '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'.

3. Face Comparison

- Compare two images
- Determine if the same person appears in both
- Output similarity percentage

The screenshot shows the AWS Rekognition console's 'Face comparison' interface. The left sidebar contains navigation links for 'Custom Moderation', 'Bulk Analysis', 'Custom Labels', 'Demos', and 'Metrics'. The main area is titled 'Face comparison' and includes a sub-header 'Compare faces to see how closely they match based on a similarity percentage. [Learn more](#)'. Below this, there are two image upload sections: 'Reference face' and 'Comparison faces'. Each section has a large image placeholder and a 'Choose a sample image' button with a small thumbnail. The 'Results' panel on the right shows a comparison of two images of a man, with a similarity score of 99.9% displayed as a blue progress bar. Below the results, there are sections for 'Request' and 'Response'. The bottom of the console shows the AWS logo, search bar, and footer information including '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'.

This screenshot shows the same AWS Rekognition console interface, but with different images. The 'Reference face' and 'Comparison faces' sections now show two different images of a man. The 'Results' panel on the right displays a similarity score of 99.8%, represented by a blue progress bar. The rest of the interface, including the sidebar, headers, and footer, remains the same as in the previous screenshot.

4. Text Detection

- Extract text from images
- Works on signboards, documents, screenshots

5. Celebrity Recognition

- Identify known public figures in an image
- Returns name + confidence score

The screenshot displays the AWS Rekognition console's 'Celebrity recognition' page. The browser's address bar shows the URL: `ap-south-1.console.aws.amazon.com/rekognition/home?region=ap-south-1#/celebrity-detection`. The AWS console header includes the 'Ask Gemini' button, a search bar, and the user's profile 'Mansa Singha (1699-7665-8643)'. The left sidebar lists navigation options under 'Amazon Rekognition', with 'Celebrity recognition' highlighted. The main content area features a large image of a woman with blonde hair, identified as 'Benedetta Porcaroli' with a 'Match confidence' of 99.9%. Below the image, there are two sections: 'Choose a sample image' showing two small portraits, and 'Use your own image' with an 'Upload or drag and drop' button and instructions: 'Image must be .jpeg or .png format and no larger than 5MB. Your image isn't stored.' The right sidebar contains a 'Results' section with the celebrity's name and confidence, and expandable sections for 'Request' and 'Response'. A 'Leave us feedback' button is located in the top right corner of the main content area. The footer of the console shows links for 'CloudShell', 'Feedback', 'Console Mobile App', and copyright information for Amazon Web Services, Inc.
