

AMAZON SIMPLE NOTIFICATION SERVICE (SNS)

us-east-1.console.aws.amazon.com/sns/v3/home?region=us-east-1#/create-topic

Amazon SNS > Topics > Create topic

Create topic

Details

Type [Info](#)
Topic type cannot be modified after topic is created

☐ FIFO (first-in, first-out)

- Strictly-preserved message ordering
- Exactly-once message delivery
- Subscription protocols: SQS

☒ Standard

- Best-effort message ordering
- At-least once message delivery
- Subscription protocols: SQS, Lambda, Data Firehose, HTTP, SMS, email, mobile application endpoints

Name

Maximum 256 characters. Can include alphanumeric characters, hyphens (-) and underscores (_).

Display name - optional [Info](#)
To use this topic with SMS subscriptions, enter a display name. Only the first 10 characters are displayed in an SMS message.

Maximum 100 characters.

Encryption - optional
Amazon SNS provides in-transit encryption by default. Enabling server-side encryption adds at-rest encryption to your topic.

Amazon SNS > Topics > Create topic

Data protection policy - optional [Info](#)
This policy defines which sensitive data to monitor and to prevent from being exchanged via your topic.

Delivery policy (HTTP/S) - optional [Info](#)
The policy defines how Amazon SNS retries failed deliveries to HTTP/S endpoints. To modify the default settings, expand this section.

Message delivery status logging - optional [Info](#)
These settings configure the logging of message delivery status to CloudWatch Logs.

Tags - optional
A tag is a metadata label that you can assign to an Amazon SNS topic. Each tag consists of a key and an optional value. You can use tags to search and filter your topics and track your costs. [Learn more](#)

Active tracing - optional [Info](#)
Use AWS X-Ray active tracing for this topic to view its traces and service map in Amazon CloudWatch. Additional costs apply.

AMAZON SIMPLE NOTIFICATION SERVICE (SNS)

Amazon SNS – Step-by-Step Description

The document demonstrates how to create an Amazon SNS (Simple Notification Service) topic, subscribe an email endpoint, and send a test notification.

Steps Performed

1. Open Amazon SNS Console

AMAZON SIMPLE NOTIFICATION SERVICE (SNS)

- Sign in to the AWS Management Console.
- Navigate to **Amazon SNS**.
- 2. **Create an SNS Topic**
 - Select **Create Topic**.
 - Choose the topic type (**Standard**).
 - Enter a topic name and display name.
 - Leave optional settings as default or configure as needed.
 - Click **Create Topic**.
- 3. **Verify Topic Creation**
 - Confirm that the topic is created successfully.
 - The topic appears in the SNS Topics list with its ARN (Amazon Resource Name).
- 4. **Create an Email Subscription**
 - Open the newly created topic.
 - Click **Create Subscription**.
 - Select **Email** as the protocol.
 - Enter the recipient email address.
 - Submit the subscription request.
- 5. **Confirm the Subscription**
 - Check the specified email inbox.
 - Open the confirmation email sent by Amazon SNS.
 - Click the **Confirm Subscription** link.
 - Verify that the subscription status changes to **Confirmed**.
- 6. **Publish a Test Message**
 - Return to the SNS topic.
 - Click **Publish Message**.
 - Enter a subject and message body.
 - Publish the notification.
- 7. **Verify Message Delivery**
 - Check the subscribed email inbox.
 - Confirm that the test notification has been received successfully.

Outcome

The exercise successfully demonstrates:

- Creating an Amazon SNS topic.
- Adding an email subscriber.
- Confirming the subscription.
- Publishing notifications.
- Receiving notifications through email using Amazon SNS.
